# ADACTIN SOFTWARE TRAINING TESTIMONIAL

## THE ROADMAP OF GETTING INTO THE IT FIELD

### 01 THE BACKGROUND

Kanad was born and raised in India. He completed his Bachelor of Engineering degree (Computer Science) from India and his MSc in computer networks from London in 2004.

After having a career in animation, starting a Café and owning a distribution business. Kanad found himself wanting a shift in industries to a technology related role in-line with his studies, this led him to begin his IT journey.

### 02 A NEW JOURNEY BEGINS

In 2019, Kanad relocated to Sydney and saw this as an opportunity, "excited with this new chapter in my life" and "eager to start a new career in Australia" but wasn't sure where to start. A friend's wife recommended him "to enrol with Adactin" for one of their training programs.

### 03 KANAD AND ADACTIN PROFESSIONAL MANUAL TESTING PROGRAM

Kanad called Adactin for a complimentary training consultation with their experienced consultants. With no prior experience in testing, he was advised to enrol in the Professional Manual Testing Program (PMTPT) course at Adactin. A foundation course for professionals with little or no experience who want to enter into the IT field.

This course covers topics like manual testing, Jira/Zephyr tools, practical assessments, introduction to automation, agile methodologies and much more.

"This was a natural fit for me because I had no previous experience with testing. I needed a foundation course and was excited," said Kanad.

"What was a little nerve-racking initially was the idea of going back to studying after 14 years gap from my previous Master's degree. But the well-structured course and excellent support from Adactin technical mentors soon replaced the daunting challenge to an exciting learning experience" he further added.

### 04 WHAT WAS NEXT? THE TRAINEESHIP PROGRAM

With the foundation and functional certification under his belt, the natural step forward is to prepare yourself for the workforce and this was when Kanad enrolled for the second step at Adactin the popular 2-month Traineeship Program.

It is a structured program and an extension to classroom training providing participants with the opportunity to further develop their software testing skills via project experience. With added benefits of workshops on interview skills, technical tools, resume preparation resource, mock interview, access to technical mentors and much more.

"Apart from the projects, the program was very proactive in the sense we got as much we put into it, this enabled me to focus on learning what I enjoyed and had me exploring new concepts in testing. Another value boost of the program was the grooming support directly throughout the program from top management", Kanad said.

### 05 A NEW CHAPTER WITH A NEW JOB

Amidst the current global economic and health environmental conditions, Kanad was fortunate enough to land a full-time job as a Functional tester with work from home arrangements in May 2020.

"All thanks to the great people behind Adactin. To anyone who is considering to enter into the IT industry, regardless of your experience or lack of it, I would highly recommend you to consider Adactin Group. However, my only word of caution is to be prepared to work." he said.
